Track 1500T

# Track Series

## 600VA - 3kVA Line Interactive UPS

### PRODUCT INFO

Marathon Power's Track models are ideal for more critical applications requiring true sine wave output while in backup mode along with the efficiency of a line interactive design. Automatic Voltage Regulation (AVR) provides mitigation of sags and swells without relying on backup battery power. This conserves battery energy for more severe disturbances such as power interruptions and outages.

Compact Track 1500TC

Tight voltage and frequency regulation along with fast transfer to backup power ensures near seamless transmission of uninterrupted power to the load. All models are equipped with power monitoring & UPS control software at no additional cost. The unique energy saving *Sleep Mode* reduces the cost of ownership and the *Cold Start* feature allows the UPS to be used as a small emergency power source.

Many models feature a user-friendly, multi-function LCD display that provides a variety of parameter settings as well as overall UPS system status. Larger models include hardwire input and output connectivity making them ideal for industrial, medical and telecom applications. Also available are extended backup time versions using external battery packs.

### FEATURES & BENEFITS

- Line-interactive topology with true sinewave output
- Hardwire input/output connection (optional)
- Automatic Voltage Regulation
- Dry relay or solid state contact signaling
- Power monitoring & UPS control software
- AC and data-line surge protection
- Digital battery management
- Auto self-test mode
- User-replaceable "hot-swappable" batteries
- 50/60Hz frequency auto-sensing

### APPLICATIONS

- Industrial Automation
- Process & Motion Control
- OEM
- Security
- Information Technology
- Telephony
- Computers
- PLC Cabinets

# Track Series Accessories & Options

The AS-400 Relay Card converts UPS communication signals to potential-free, dry contacts for industrial control.

The External AS-400 Relay Box converts UPS communication signals to potential-free, dry contacts for industrial control.

The NetAgent 9 is a centralized, real time UPS communication card option for monitoring and management.

Extended Battery Packs and individual battery options that feature custom enclosures and wide temperature range batteries.
